

FIRST IMPRESSIONS

As your customer opens the door and enters your aircraft hangar, you notice the hint of a smile...eyes widen just for a second.

You made your customer feel important.

How?

By choosing Concare Inc. to install your high performance concrete floor coating, you've provided your customers with the best experience possible.

- Bright, clean, high gloss finish
- Skid resistant safe surface
- Chemical resistant surface
- Static resistant surface options
- Safety striping
- Light reflectivity that saves energy

When your concrete floor coating is installed accurately and according to the manufacturers installation specifications, you can ensure an easy-to-maintain, safe & protected flooring system that lasts for years.

Choosing the Right Manufacturer's Product to Install

Concare's origins began in the Aviation Industry. Since 1978, Concare has installed flooring in:

- Corporate
- Private
- Military
- Heliports
- Fuel & Storage hangars in the Midwest.

CONCARE INC.[®]
CONCRETE PROTECTION & RESTORATION

Chemical resistant surface – Protection is critical when fluids like Skydrol, 5606 and JetA hit the floor. Protect against premature wear, discoloration or flooring failure protects against staining from tires.

Static resistant surface – ESD or anti-static maintains ignition control safety and security of the facility. *(optional)*

Safety striping – Pedestrian traffic and workers can quickly identify the safest route to walk and transport items within the facility. Keeping safe is everyone's concern.

As a result, we know a thing or two about the best performing products in the market today.

Here's what you can expect from a Concare installed high performance flooring system:

Lowest Lifecycle Cost ♦ Done Right ♦ On-Time

Bright, clean, high gloss/satin finish – UV protected, your flooring system will maintain a bright finish that is easy to clean. The look alone will keep your customers coming back for the experience.

Slip resistant safe surface – Enhanced traction ensures the safety and security of your employees, customers and guests when water, liquids or dust come in contact with the floor.

Light reflectivity that saves energy – Conserving energy is of critical importance. The high gloss/satin, bright floor will allow workers to see better without the use of additional lighting. Customers will also appreciate natural lighting.
